Attention should be paid to dimensional variances due to thermal expansion, chucking, and bend of the material.

*When used in water, fitting must be design considering swelling characteristic. Please add swelling correction value at page 349-350, when you set a fitting.

Machining accuracy (bushing)

I.D.	O.D.	Length
class 8 to 9	class 7 to 8	class 9 to 10

Classes here are in JIS standard.

This product demonstrates satisfactory performance at the slide surface roughness of Rz6.3 to 12.5μm.

Dimensions may change due to thermal expansion, chucking pressure, moisture absorption deformation, etc. High accuracy is ensured if the product is installed on the housing and then ground.

Shape of base material (Note)	—	—	chip and others	sheet
			sheet	sheet

*The values shown above are typical values, not the standard values.

(Note) Shape of base material→chip and others : Shape of base material→sheet

When chip-shaped base material is used, the tensile strength, compression strength and impact strength are measured at right angles to the forming direction and the bending strength is measured in parallel with the forming direction. When sheet-shaped base material is used, the bending strength, compression strength and impact strength are measured at right angles to the layers and the tensile strength is measured in parallel with the layers.
